

IN THE CLAIMS:

Please cancel Claim 4 without prejudice or disclaimer of subject matter.

Please amend Claims 1, 3, 5, 6, and 9-11 as indicated below. The following is a complete listing of claims and replaces all prior versions and listings of claims in the present application:

1. (Currently Amended) A method for facilitating the management of a plurality of data sets on a radio frequency (RF) transaction device, the method comprising the steps of:

~~enrolling a first data set owner in multiple transaction accounts and a second data set owner in multiple transaction accounts in association with a transaction device program;~~

adding to a database on the RF transaction device[[,]] a first data set of a first format, ~~wherein said first data set is owned by said first data set owner; adding to a database on the transaction device, and~~ a second data set of a second format, wherein;

[[said]] the first data set is owned by a first data set owner and the second data set is owned by [[said]] a second data set owner,

~~wherein said~~ the first data set owner is distinct from [[said]] the second data set owner, ~~and said~~

the first format is different from [[said]] the second format, and

~~wherein said~~ the first data set is stored in accordance with [[said]] the first format, and [[said]] the second data set is stored in accordance with [[said]] the second format;

configuring a first secondary identifier correlated to the first data set and a second secondary identifier correlated to the second data set, wherein the first secondary identifier and

the second secondary identifier are configured by the first data set owner and the second data set owner independently;

receiving a ~~facilitating~~ selection of at least one of [[said]] the first data set and [[said]] the second data set to complete a transaction request, wherein:

if the first data set is selected, the receiving includes receiving [[using]] a first secondary identifier indicia, ~~to select said first data set~~ and

if the second data set is selected, the receiving includes receiving a second secondary identifier indicia ~~to select said second data set~~;

authenticating the transaction request using the first secondary identifier indicia if the first data set is selected and using the second secondary identifier indicia if the second data set is selected;

determining, based on the authenticating, whether the transaction request is approved; and

completing, if the determining indicates that the transaction request is approved, [[said]] the transaction request according to [[said]] the selection.

2. (Canceled).

3. (Currently Amended) The method of claim 1, ~~comprising verifying at least one of said~~ wherein at least one of the first secondary identifier indicia and [[said]] the second secondary identifier indicia is a personal identifier number (PIN) or a biometric identifier.

4. (Canceled).

5. (Currently Amended) The method of claim 1, wherein the step of receiving a ~~facilitating~~ selection further comprises receiving an ~~facilitating~~ allocation of a first portion of ~~[[said]]~~ the transaction request to ~~[[said]]~~ the first data set for transaction completion.

6. (Currently Amended) The method of claim 5, wherein the step of receiving a ~~facilitating~~ selection further comprises receiving an ~~facilitating~~ allocation of a second portion of ~~[[said]]~~ the transaction request to ~~[[said]]~~ the second data set for transaction completion.

7. (Canceled).

8. (Canceled).

9. (Currently Amended) A computer-readable storage medium containing a set of instructions for a general purpose computer configured for:

~~facilitating enrollment of a first data set owner and a second data set owner in a multiple transaction accounts on a transaction device program;~~

~~facilitating adding to a database on a radio frequency (RF) transaction device[[,]] a first data set of a first format, wherein said first data set is owned by said first data set owner; facilitating adding to a database on the transaction device, and~~ a second data set of a second format, wherein;

the first data set is owned by the first data set owner and ~~[[said]]~~ the second data set is owned by ~~[[said]]~~ the second data set owner,

~~wherein said~~ the first data set owner is distinct from ~~[[said]]~~ the second data set owner, ~~and said~~

the first format is different from ~~[[said]]~~ the second format, and

~~wherein said~~ the first data set is stored in accordance with ~~[[said]]~~ the first format, and ~~[[said]]~~ the second data set is stored in accordance with ~~[[said]]~~ the second format;

configuring a first secondary identifier correlated to the first data set and a second secondary identifier correlated to the second data set, wherein the first secondary identifier and the second secondary identifier are configured by the first data set owner and the second data set owner independently;

receiving a ~~facilitating~~ selection of at least one of ~~[[said]]~~ the first data set and ~~[[said]]~~ the second data set to complete a transaction request, wherein:

if the first data set is selected, the receiving includes receiving ~~[[using]]~~ a first secondary identifier indicia ~~to select said first data set, said first secondary identifier indicia being correlated to said first data set, and~~

if the second data set is selected, the receiving includes receiving ~~[[using]]~~ a second secondary identifier indicia ~~to select said second data set, said second secondary identifier indicia being correlated to said second data set;~~

authenticating the transaction request using the first secondary identifier indicia if the first data set is selected and using the second secondary identifier indicia if the second data set is selected;

determining, based on the authenticating, whether the transaction request is approved; and

completing, if the determining indicates that the transaction request is approved,
[[said]] the transaction request according to [[said]] the selection.

10. (Currently Amended) The method of claim 1, wherein the receiving a
~~facilitating~~ selection step further comprises receiving an ~~facilitating~~ allocation of the entire
transaction request to either [[said]] the first data set or [[said]] the second data set.

11. (Currently Amended) The method of claim 1, wherein the receiving a
~~facilitating~~ selection step further comprises receiving a ~~facilitating~~ selection of a plurality of data
sets to complete [[said]] the transaction request.
